

Amendments to the Abstract

Replace the abstract with the following replacement abstract:

~~The invention relates to a method~~ A process and a device ~~for supplying~~ supply printing ink to and ~~carrying it off~~ remove ink from a doctor blade device of the inking system of a rotary printing press. ~~Said~~ The device ~~comprises~~ has a doctor blade support provided with a linearly extending groove and with doctor blades that ~~can be put against~~ are contacted with an inking roller or screen roller, ~~said~~ the blades ~~delimiting~~ forming together with the inking roller and the groove an inking chamber. The device ~~further comprises~~ has conduits and motor-driven pump devices ~~for supplying that supply~~ ink to and ~~carrying it off~~ remove ink from the inking chamber. The motors ~~used~~ are preadjusted in terms of their parameters and are not modifiable during operation. ~~If necessary, a~~ A portion of the ink from the flow of ink supplied to the doctor blade device can be ~~carried off~~ diverted to an ink supply source, and/or a portion of the ink from the flow of ink ~~carried off~~ removed from the doctor blade device can be returned to the ink supply conduit.

For the examiner's convenience, a clean text version of the replacement abstract (150 words) is presented below:

A process and a device supply printing ink to and remove ink from a doctor blade device of the inking system of a rotary printing press. The device has a doctor blade support provided with a linearly extending groove and with doctor blades that are contacted with an inking roller or screen roller, the blades forming together with the inking roller and the groove an inking chamber. The device has conduits and motor-driven pump devices that supply ink to and remove ink from the inking chamber. The motors are preadjusted in terms of their parameters and are not modifiable during operation. A portion of the ink from the flow of ink supplied to the doctor blade device can be diverted to an ink supply source, and/or a portion of the ink from the flow of ink removed from the doctor blade device can be returned to the ink supply conduit.
